

# LG VX6100 Main Display Replacement

This guide will show how to access and remove the phone's main display screen.

Written By: Ryan Bishop

## INTRODUCTION

This guide will go step-by-step through the process of accessing the phone's main display. Pictures and instructions accompany each step in the guide.

### TOOLS:

- [Desoldering Braid](#) (1)
  - [Phillips #00 Screwdriver](#) (1)
  - [Large Needle Nose Pliers](#) (1)
  - [Push Pin](#) (1)
  - [Soldering Station](#) (1)
  - [iFixit Opening Tools](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Front Case

- Remove the four grey plugs using either tweezers or a push pin.

## Step 2

- Remove the four screws that are now exposed using a Phillips #00 screwdriver.
- ⓘ Be sure to put the screws in a safe place as they are very small and easy to lose.

### Step 3

- Once all the screws have been removed, use a plastic opener tool to pry the case from the rest of the phone.
- Insert the opener tool into the seam between the case and the phone. Apply pressure to separate the two pieces.
- Do this across the entire length of the seam until the case is no longer attached to the phone.

### Step 4

- The case can now be removed and the interior of the front is accessible.

## Step 5 — Main Display

- Locate the solder on the side of the metal plate on the top half of the phone.
- Place a piece of solder wick on top of the solder.
- Very carefully, place the tip of the soldering iron on top of the solder wick. Hold it steady until the solder is soaked up into the solder wick.

 The soldering iron will damage circuitry if held down for too long.

- Cut off the used solder wick with pliers and repeat this step if any solder remains.

## Step 6

- After the solder has been removed, pry off the metal plate with the plastic opening tool.

## Step 7

- Remove the main display by lifting up the extruded white edge with your fingernail.

To reassemble your device, follow these instructions in reverse order.
